

## Embedded Systems Developer (f/m)

### About us ...

Adaptivia is an embedded systems and software company. We develop data acquisition and control systems to optimize water usage and reduce environmental pollution.

### What you'll do ...

You'll develop small-sized micro-controller based products. In close collaboration with an experienced embedded systems developer you'll be in charge of developing and testing sensor networks and long-run telemetry systems, especially in the area of water management and irrigation control. We'll increase the task-size a little every week, until you can work on your own features and products, and test new features together with clients in the field, sometimes abroad and get feedback from them.

### We're looking for ...

.. a talented **junior embedded systems developer**. You have been developing your own pet projects based on a micro-controller and eventually a radio transceiver during uni already. And you've built a solid foundation in C/C++. You know how to read and understand data sheets and schematics. Our software and documentation is in English, but you'll need at least basic German skills as well.

### Reasons to work at Adaptivia ...

We're a small experienced team, working for a growing customer base, creating high-quality products for happy customers and a better environment. We offer you the opportunity to constantly evolve and you get the chance to co-create great and meaningful products. The office is located in the heart of Vienna. We're very flexible and family-friendly.

### Apply now!

Please, send us a short email to [office@adaptivia.com](mailto:office@adaptivia.com) and (instead of polishing your CV) tell us about yourself, your interests and your recent or on-going projects (in German or English).

Due to Austrian law we are obliged to state the minimum gross salary according to legal regulations and for a full time position (38,5 hours / week) this amounts to EUR 31.178,- gross. Depending on experience and education higher remuneration is possible.
