Python and JavaScript Developer (Freelancer)

We are ..

Adaptivia is a software company developing smart appliances for industry since 2008. We create environmental monitoring systems, enabling environmental research, smart water management, precision agriculture and unattended environmental impact assessment.

What you'll do ...

You'll be in charge of developing web applications in the area of monitoring and data analytics. In close collaboration with an application developer you'll work on data visualisation and significantly improve workflows.

We're looking for ...

... a part-time / freelance **developer (15-25h / week)**. You've been developing several web frontends already and you know how to build easy to maintain and user-friendly web applications.
You've a solid foundation in HTML5 and state-of-the art JavaScript-Frameworks (JQuery, AngularJS etc.). Preferably you've experience in building lightweight backend-applications based on Python (linux, twisted, postgres, sqlalchemy, flask/django). Do you have a small portfolio site already or a github account? We'd love to see your work.

Reasons to work at Adaptivia ...

We offer you the opportunity to create meaningful products in an agile and customer-oriented manner, flexible work-time (after some time of getting to know you working from home is perfectly possible) above average compensation and the chance to be part of a growing team developing products for fast growing and new markets.

Please, send us an email, including your CV and/or portfolio: **office@adaptivia.com**
